HIGH PRESSURE SANITATION PUMPS

Application: High pressure / high temperature wash pumps.

Customer Challenge: Improve the plant's sanitation efficiency and reduce maintenance costs.

Wajax Solution: Supplied a Roto-Jet high pressure pump and motor assembly with a system control panel featuring a low pressure detector, flow meter and pressure switches. All were integrated into the control panel for system monitoring and performance measurement.

INTERNAL GEAR PUMPS

Application: Food Production Pumps

Customer Challenge: Large wholesale baker facility's rotary lobe production pumps were leaking product onto the floor causing waste, downtime, and safety concerns.

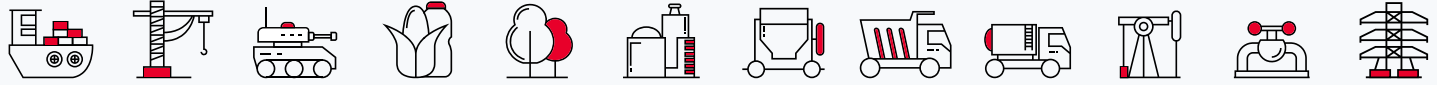

Wajax Solution: Calculated comparison to highlight how short-term seal replacement was costing much more in the long run than replacing the pump entirely. Wajax identified the DESMI Rotan Internal Gear Pump as the best solution as it is ideal for high viscosity material – such as milk and dark chocolate, as well as mixed recipe ingredients. The customer was pleased with their pump that checked all the boxes for increased time between maintenance and improve overall profitability.

Across Industries. Across Canada.

Since 1858, Wajax has been serving major Canadian industries as one of the nation's leading providers of heavy equipment, power systems, and industrial products and services.
